medasync

Solutions for the Payment Paradigm Shift

MedaSync is the centralized case management system that helps SNFs address each of these challenges. The software monitors care and services, instantly flags anomalies, and alerts teams to reimbursement opportunities that are typically missed. With intelligent, actionable data, SNFs can improve their operational efficiency and workflow, reduce costs and advocate for additional services, and use data to improve decisionmaking.

Code&Care's part was the improvements of the current application platform, upgrading on patient forms, improve intake flow and updates, working on analytics dashboard and alerts features. Features include implementations with the latest React modules, working with parsing docs, import/export data from different file types.

Full-Stack Application with EOS Smart Contract

EOS LAB is a Segregated Portfolio Company based out of the Grand Cayman Islands, established in 2018. Our focus is on the research and development of innovative products supporting the EOSIO ecosystem, and products aiming to disrupt the status quo.

We created a full-stack application that integrated with EOS smart contract. EOS REX is a CPU and NET resource rental market in which holders of the core token of the blockchain can buy and sell slices of the REX pool in the form of REX tokens. Note that a REX token is not tradable with third parties, it is merely a convenient accounting unit that can only be directly bought and sold from and to the pool. Its value in terms of the core token always increases, but the return rate is determined by the level of rental activity.

The Power of Voice to Open a New Way to Communicate

Reverb app is a tool that uses the power of voice to open a new way to communicate. You can record and send voice messages, reverbs, to the team members instantly. Reverbs are transcribed, creating searchable notes you can go back to.

We developed a desktop application that operates like a chat and can be used to establish your team and perform communication there through voice recordings. We implemented the functionality for creating profiles, teams, inviting team members, recording audio messages, and starting sharing them inside the team.

The tool is convenient to use as a chat as you can send messages either to the particular team members or to the whole team. Also, we built a feature to browse the text of the recording while listening to it. Moreover, the user can review his history of messages to find the topic that was discussed before.

GoodDollar

New, Global, Open-Source Cryptocurrency

The GoodDollar experiment is a series of tests with the ultimate purpose of reducing wealth inequality through blockchain technology. Their mission is to build a new, global, open-source cryptocurrency – called GoodDollar – to distribute money using the principles of universal basic income (UBI). GoodDollar, a 100% not-for-profit project, is nurturing an ecosystem – including academics, NGOs, ethical investors, crypto supporters, and anyone who cares about reducing inequality.

Our main goal was to implement the architecture at AWS and configure it to arrange the high level of data persistence and synchronization between instances. Worked on the deployment of the project and its configuration on AWS Beanstalk, Elastic Block Storage, and load testing of the GunDB. Apart from this, we handled the deployment of several services to the client's AWS as well as the configuration of the Fuse node with the creation of the different blockchain roles.

Find a Marketing Agency that Hits the Spot

Agency Spotter reinvents the way brands find and work with creative agencies, design firms, and marketing service providers. For every business, finding marketing agencies takes significant time and is full of risk. Agency Spotter's aim is to help change that. Their digital platform makes it much faster and free to find great agencies and design firms that fit the needs of brands.

We were responsible for the development of the web parser functionality and optimization of its architecture at AWS. The main challenge was to establish the infrastructure in a way that allows parsing multiple websites at once without any queues for Lambda functions. Except for parsing websites for contact information, images and banners we implemented an option to arrange this process through the social networks as an additional step of the parsing process.

Portfolio Management and Asset Management Area

FORSA Geld- und Kapitalmarkt GmbH was founded as portfolio management and asset management in the German area.

We are building from scratch the first phase of a digital platform for managing investing sources by different roles as a bank representative, investor itself, and consulting role as admin of the platform. There are three different interfaces for three role types with the grade of permissions handled both on the backend and front-end sides. The admin role can follow the steps made by users on the platform and offer his help in case of any blockers. The team strongly participated in user stories creation and acceptance criteria discussion offering suggestions about client and back-end side work. The team worked according to Scrum methodology with all its artifacts and ceremonies.

How it works

Odissea is a gambling online service where users can get acquainted with the bets for different kinds of sports and make their odds.

The project consists of several web apps with a list of bets for different types of sports. Our part is to rebuild its layout and configure the integration with the API to get the configuration parameters from the shop owner's interface to show the bets (odds) in the order and with the timeline that was presented by the shop owner.

Trading Cryptocurrency Platform

Founded at the forefront of blockchain technology in 2013, Coinbar Group comprises nearly 50 cryptocurrency specialists with expertise in project and product development, market analysis and asset management, cryptocurrency incubators, and venture capital.

We worked on the implementation of 2 APIs, one for internal purposes and another for external ones. These APIs were responsible for handling authorization and payment processing processes. Also, we implemented the WooCommerce plugin that was used on the main site to allow users to authorize and request a purchase of the currency.
